

Limited Visual Dam Safety Inspection Summary Report

MA-094

Kapalaalaea Reservoir

Maui, Hawaii

Prepared by:

U.S. ARMY CORPS OF ENGINEERS HONOLULU ENGINEER DISTRICT

STATE OF HAWAII
DEPARTMENT OF LAND AND NATURAL RESOURCES

May 2006

Dam ID:	MA-0094
Name: Ka	apalaaea Reservoir

Limited Visual Dam Safety Inspection Conducted on: 05 April 2006

I. Purpose

Due to disaster occurrences of periodic heavy rains and flooding, which has caused extensive damage to property and loss of lives, the Governor has issued a State of Emergency Proclamation extending from February 20, 2006 to April 9, 2006. In light of the tragic failure of the Kaloko dam on Kauai and the continued forecast of heavy rains, emergency inspections of all regulated dams in all counties are being undertaken.

These inspections are for the purpose of determining if any of the regulated dams and reservoirs in the City and County of Honolulu, Maui County or Hawaii County, are suspect for immediate concern to the downstream area under the prolonged conditions of heavy rain showers.

II. Authority

Inspections are authorized under the Hawaii Dam Safety Act of 1987, Chapter 179D "Dams and Reservoirs" of Hawaii Revised Statues, and Title 13, Subtitle 7, Chapter 190, "Dams and Reservoirs" of the Hawaii Administrative Rules.

These inspections are being conducted under joint agreements of the U.S. Army Corps of Engineers (USACE), the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS), and the State of Hawaii. The Memorandum of Agreement with the U.S. Army Corps of Engineers is entered into pursuant to 10 U.S.C. § 3036(d)(2), and the Intergovernmental Cooperation Act (31 U.S.C. §6505), and established via support agreement number DL-06-01.

III. Scope

Visual inspection will be made on parts of the embankment and appurtenant works readily available and visible for inspection by the inspection team at the time of the inspection. Such parts and appurtenant works would include the upstream slope, crest, downstream slope, abutments and toes, outlet works, and spillway.

On the date of this limited visual inspection, there may appear to be no immediate threat to the safety of the dam, however no assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

Dam ID: <u>MA-0094</u>
Name: Kapalaaea Reservoir____

IV. Limitations of Findings and Recommendations

The inspection is based only on visible features/areas of the dam on the day of inspection. The inspection does not entail detailed stability, hydrologic, hydraulic, or seismic investigations. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies.

VIII. Dam Type

The dam appeared to be an earthen embankment dam.

Dam ID: <u>MA-0094</u>
Name: Kapalaaea Reservoir____

IX. Dam Classification

The current hazard classification of this dam is: Undetermined

The classification should be determined.

Hazard Potential Classification based on the following:

	<u> </u>	<u> </u>
Category	Loss of Life	Economic Loss
Low	None Expected	Minimal (undeveloped to
	-	occasional structures
		or agriculture)
Significant	Few (No Urban development and	Appreciable (Notable
	no more than a small	agriculture, industry or
	number of inhabitable	structures)
	structures)	
High	More than a few	Extensive community, industry
-		or agriculture.

Based on inventoried storage and height data, the size classification of the dam is: Most likely Intermediate but insufficient information is available to inspectors to make a determination.

Size Classification based on the following:

Category	Storage (Acre-Feet)	Height (feet)
Small	< 1000	< 40
Intermediate	> 1000 and < 50,000	> 40 and < 100
Large	> 50,000	> 100

X. Summary of Inspection

Condition Rating Criteria: The conditional terms in this report are used to generally describe the conditions below. Inspections, monitoring, and additional investigations are considered to be incidental to all condition ratings.

Satisfactory	Expected to fulfill intended function.
Fair	Expected to fulfill intended function, but maintenance is recommended.
Poor	May not fulfill intended function; maintenance or repairs are necessary.
Unsatisfactory	Is not expected to fulfill intended function; repair, replacement, or modification is necessary.
Unknown	Not visible, not accessible, not inspected, or unable to determine the condition rating based on the observation taken.

Dam ID:	MA-0094	
Name: Ka	apalaaea Reservoir	

A. General appearance:

The dam consists of an earthfill embankment. The dam is approximately 45 feet tall and 350 feet long. The dam is feed by natural stream. The purpose of the reservoir is irrigation.

Findings and Corrective Actions:

- a. The Owner shall maintain documentations including Construction plans, specifications, improvements, modifications, Operations and Maintenance Manuals and routine inspection logs for this dam facility.
- b. An EAP is recommended for all dams regardless of hazard class. Submit EAP if developed for the facility.
- c. Routine inspection logs were not inspected.
- d. Access to site appears to be satisfactory.
- e. Submit current Operations and Maintenance Manual or Procedures for this dam / reservoir facility.
- f. Emergency Alarms / Monitors: There were no alarms or monitors observed on this reservoir.
- g. Power / Communication: There were no communication systems observed on this reservoir.

B. Access / Security:

Access to the dam was accomplished via a private roadway off a State Highway. A four-wheel drive vehicle is required.

Security issues. Access to the dam is controlled by a locked gate.

C. Intake Works:

Natural stream fills reservoir.

Findings and Corrective Actions:

a. The intake works were not inspected.

D. Reservoir:

The reservoir level was 38.5 feet per gage.

The normal operating level varies. The reservoir levels are dependent upon rainfall.

Findings and Corrective Actions:

a. The reservoir was not inspected.

Dam ID:	MA-0094	
Name: Ka	apalaaea Reservoir	

E. Upstream Slope: (Satisfactory)

The upstream slope was 1 on 1 to 1 on 2. Upper 3' to 5' of the upstream slope is near vertical and is supported by a rock retaining wall.

There were no erosion, cracks and sinkholes observed.

There is low ground cover of short grass on the upstream slope.

Findings and Corrective Actions:

a. The upstream slope appeared to be in satisfactory condition, no corrective actions are required at this time.

F. Crest: (Satisfactory)

The dam crest was approximately 15 feet wide.

There was unsurfaced road on access the crest.

Findings and Corrective Actions:

a. The dam crest appeared to be in fair to be in satisfactory condition, no corrective actions are required at this time.

G. Downstream Slope: (Satisfactory)

The downstream slope was approximately 1 on 1.5.

There was access to the roadway to outlet works.

No erosion was observed on the downstream slope.

Sinkholes were not observed on the downstream slope.

There was low ground cover with short grass on the slope.

Seepage was not observed on the downstream.

Findings and Corrective Actions:

a. The downstream slope appeared to be in satisfactory condition, no corrective actions are required at this time.

H. Abutments / Toe: (Satisfactory)

Short grass covers the abutments and toe.

Ponding water was observed in a low spot on left side of the valley floor. Unable to detect any seepage exit points. Unknown if ponding is from seepage or surface runoff. The clarity of the water was clear.

Findings and Corrective Actions:

a. The abutments/toe appeared to be in satisfactory condition, no corrective actions are required at this time.

Dam ID:	MA-0094	
Name: Ka	palaaea Reservoir	

I. Outlet Works: (Satisfactory)

The outlet consists of an 18" diameter steel pipe.

The control of the outlet is with a valve that is on the downstream side.

Findings and Corrective Actions:

- a. The outlet works were not inspected.
- b. The outlet works appeared to be in satisfactory condition, no corrective actions are required at this time.

J. Spillway: (Satisfactory)

This spillway is consisted of a concrete apron that is located on the left abutment.

The dimension is 20 feet.

The spillway approach was clear.

There was no erosion observed near the spillway.

Findings and Corrective Actions:

a. The Spillway appeared to be in satisfactory condition, no corrective actions are required at this time.

K. Down Stream Channel: (Unknown)

Findings and Corrective Actions:

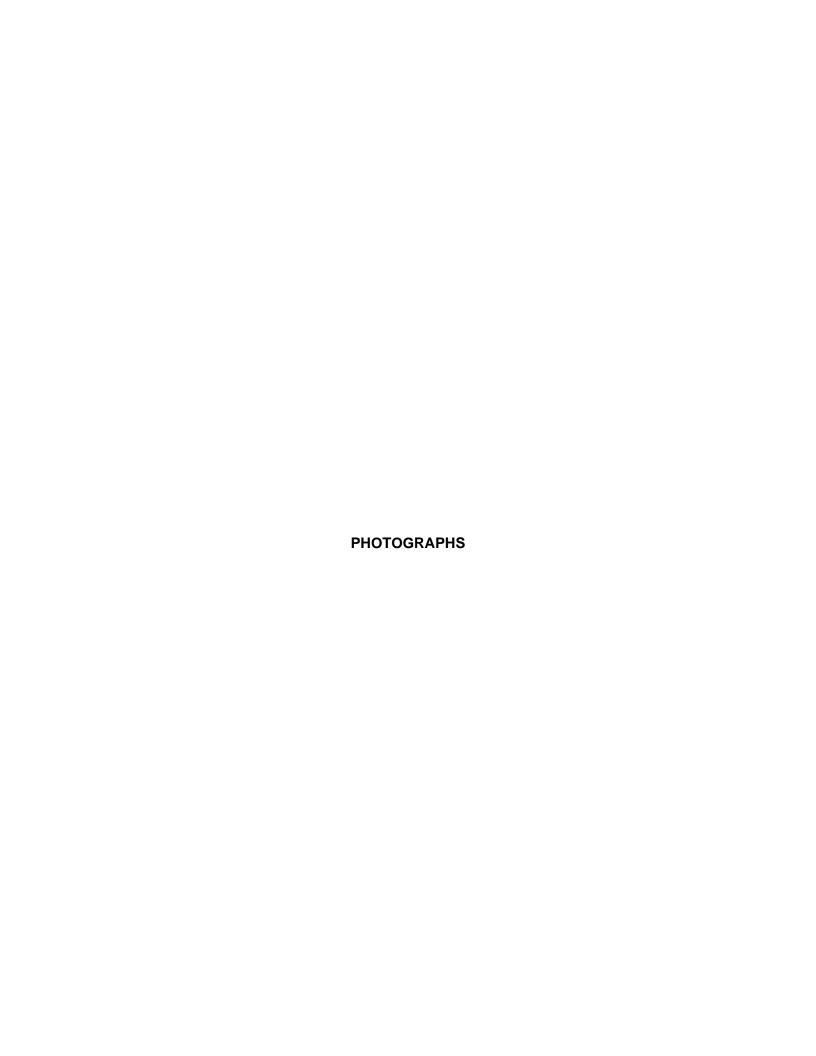

a. The downstream channel was not inspected.

XI. Additional Comments:

There is no immediate threat to the safety of the dam.

Recommendation:

The vegetation conditions on the embankment, abutments, and downstream toe are excellent. Short grass covers the embankment, downstream toe, and abutments. The dam owner should continue with their current vegetation management practice.

KAPALAA	AEA RESERVOIR

•	tion No:
Date:	4/5/200

Additional Comments:

On the date of this limited visual inspection, there appeared to be no immediate threat to the safety of the dam. No assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

FINDINGS:	
Conclusion: There is no immediate threat to the safety of	
the dan	
Decommadations:	
The vegetation conditions on the embankment,	
abetments, and downstream toe are excellent. Short	
grass covers the embankment, downstream toe, and	per a production program.
abutments. The dam owner should continue with	
their current vegetation management practice.

Limitations and Intent of this Dam Safety Inspection:

This Dam Safety Inspection was conducted to assess the general overall condition of the reservoir/dam, identify visible deficiencies, and recommend areas of for monitoring, additional investigative studies and corrective actions. The inspection is based only on visible features/areas of the dam on the day of inspection. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies. The inspection was conducted under the authority of the Hawaii Revised Statures Chapter 179D, and Hawaii Administrative Rules, Title 13, Chapter 190, titled "Dams and Reservoirs". Questions regarding this inspection should be forwarded to the Hawaii State Dam Safety Program; PO Box 373; Honolulu, Hawaii 96809; Ph. (808) 587-0236.

Revised: Dec. 1, 2003
